in the building, roofing, fencing and agricultural trades

Product Information

Combination Airbrick 9" x 3"

Provides high levels of ventilation through walls and into under floor voids.

The airbrick incorporates a front mounted grill which consists of evenly spaced opening specifically sized to prohibit large insects gaining access but wide enough not to be blocked by debris, paint or water droplets.

A mortar key around the fabric of the airbrick ensures secure adhesion to the building fabric. While a clip together facility provides a choice of ventilation sizes.

Installation

1. The airbrick should be built into the brick course as per normal practice although care should be taken to keep the airflow passage clear from mortar droppings.
2. To be used in conjunction with other products from our Building Vent range in order to provide a complete through wall ventilation system.
3. If the cavity has been bridged, a suitable cavity tray should be fitted over the airbrick if above the DPC.
